

How To Run A Curriculum Decomposition Simulation

Learn how to use the SABI curriculum tool to automate the decomposition of skills and generate course briefs. This guide walks you through the step-by-step process of simulating sourcing and verifying your curriculum content.

Skill Intake

1

Navigate to <https://sabificate.com/zTemp/SABICurriculumToolTest/sabi-v3-curriculum-demo.html>

Run the full receivables cycle for an SME: invoice correctly, monitor aging, chase overdue payments without damaging customer relationships, and report receivables position to the owner.

Target learner role

Accounts officer in a 5-50 person SME

Context mode

Nigerian (NGN, NDPA/CBN/FIRS, local scenarios)

Decompose this skill →

POC — proves four v3 concepts: AI decomposition, brief pre-fill, claim-level trust, and SME-supplied reviewed audio against editable scripts.

2 Click 'Skill statement' field

1 Skill intake

2 Decomposition

3 Pre-filled brief

4 Course (v3)

Skill intake

The SME describes one skill. This is the only blank form in the whole pipeline — everything downstream is pre-filled from here.

Skill statement — the broad capability; the AI decomposes this

Run the full receivables cycle for an SME: invoice correctly, monitor aging, chase overdue payments without damaging customer relationships, and report receivables position to the owner.

Decomposition · 4 competencies · simulated

Editable map. Pick a competency to author. The SME spends curriculum-design judgment here, before any content exists.

AI mode **Simulated** Live (proxy) Canned map — always works offline, proves the workflow.

1 Issue compliant, payable invoices **Approve & pre-fill brief →**

Prepare invoices that meet FIRS requirements and remove common payment blockers

Objective: After this course the learner will be able to prepare an invoice containing all FIRS-required fields and payment rails appropriate to the customer, without errors that delay payment.

Artifact: A completed invoice for a provided scenario, submitted as photo or document · Fits 10-15 minutes if VAT edge cases are deferred

2 Monitor receivables aging **Approve & pre-fill brief →**

Maintain and read an aging schedule to spot risk early

Objective: After this course the learner will be able to build a four-bucket aging schedule from a transaction list and identify the two accounts requiring action this week.

Artifact: A completed aging schedule (spreadsheet) from provided transaction data

Brief Preparation

7 Click 'Things to avoid' field

Course brief · for: Issue compliant, payable invoices

This is the throughput claim. The SME did not start from blank — every green field was carried down from the decomposition. They edit, they don't author from scratch.

Learning objective PRE-FILLED

After this course the learner will be able to prepare an invoice containing all FIRS-required fields and payment rails appropriate to the customer, without errors that delay payment.

Learner role PRE-FILLED

Accounts officer in a 5-50 person SME

Context mode PRE-FILLED

Nigerian (NGN, NDPA/CBN/FIRS)

Action-learning artifact intent PRE-FILLED

A completed invoice for a provided scenario, submitted as photo or document

Functional statement PRE-FILLED

Prepare invoices that meet FIRS requirements and remove common payment blockers

Things to avoid — blank; the SME adds course-specific constraints

(the only field the SME fills here)

Generate & review course →

← Back to map

In the real pipeline this brief runs the v0.1 clarify → draft loop. For the POC we jump to the finished, migrated v3 course so you can see the output.

8 Click "Generate & review course →"
